

# Achieved ERP Cloud Modernization

Case Study

## Revenues

\$256.7B

## Employees

186,000

## Background

This company is one of the most well-known technology companies in the world and provides internet and cloud services and products to enterprises and consumers.

## Note

RunMyJobs is included as part of Google's reference architecture as the standard, best-practice system for automation

## Challenge

As part of their digital transformation journey, this company was moving from their legacy Oracle ERP to SAP S/4HANA and they didn't want to disrupt their current mission-critical processes. They were also seeking to implement new automations that would increase productivity, decrease manual intervention and risk of error, and would support cash collection. Platform needed to meet requirements to run on their cloud platform, use their in-house technologies and follow SSO policies.

## Implementations

- Pay-per click advertiser billing
- Treasury and accounting processes for financial close

## Outcomes

- Consistently reliable automations related to processing and billing of \$75.94B
- advertising revenue
- Shortened end to end financial close process
