

Redwood Insights for RunMyJobs

Orchestration observability for your mission-critical business processes

Redwood Insights provides an essential feedback loop that transforms your automations from an opaque process into a transparent ecosystem.

You benefit from deep visibility into your workload automation, providing a comprehensive understanding of your critical business process health and performance so you can predict bottlenecks and turn uncertainty into opportunity.

Out-of-the-box advantages

Optimize business processes

- Explore performance
- Identify bottlenecks
- Pinpoint improvements

Accelerate problem management

- Drill down in detail
- Identify recurring issues
- Discover root causes

Simplify governance and auditing

- Get comprehensive data
- Stay audit-ready
- Easily download reports

Optional capabilities

Tailor reporting by team, role or initiative: Create purpose-built dashboards for operations, platform teams and business stakeholders, focused on the automations they own and the KPIs they care about (e.g., data pipelines, supply chain, finance).

Deliver executive-ready reporting: Build leadership dashboards that summarize health, risk and outcomes across domains – designed for clarity, consistency and repeatable reviews.

Analyze long-term trends: Support audit cycles, seasonality and performance benchmarking over time with extended retention.

Included with Redwood Insights for RunMyJobs

Dynamic views

enable you to explore the connections between configurations and run-time behavior.

Role-specific dashboards

are optimized for functions such as incident management and governance.

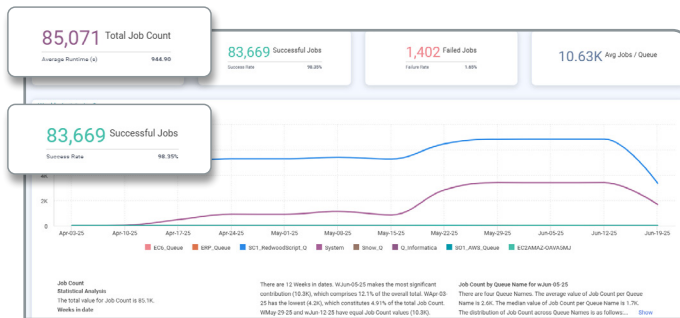

Smart narratives

go beyond simple charts to help you understand complex situations and make faster decisions.

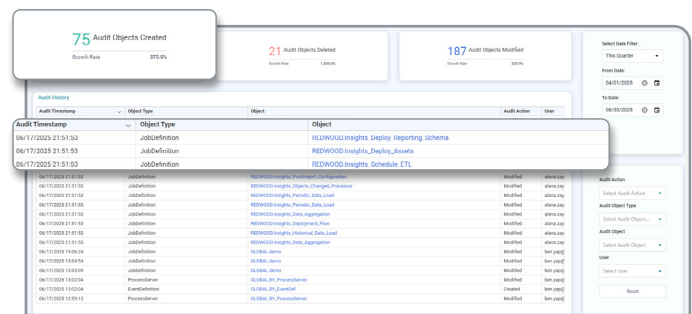

Purpose-built dashboards for every role

For operators

Give your operations team the tools they need to understand trends and improve reliability.

- **Operator overview:** Get a comprehensive view of automation health.
- **Job, queue and job server analysis:** Investigate and optimize performance and resource contention.

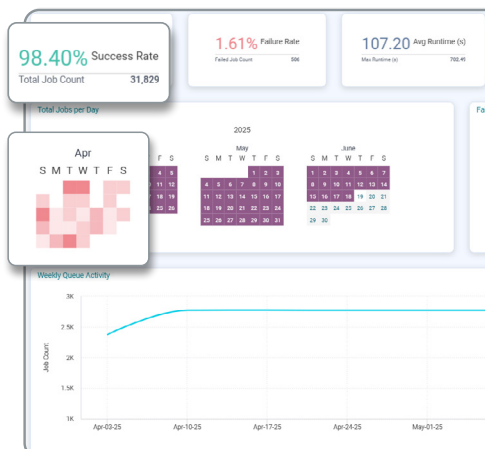

For administrators

Enable administrators to easily assess governance and demonstrate compliance to auditors.

- **Object audit summary:** Track all changes to automation objects for complete visibility.
- **Job history summary:** Access aggregated historical job data for forensic analysis.

Dashboards for deep dives

Go even deeper with object-specific dashboards available directly from contextual menus, providing targeted views for critical analysis.

- **Queue and job server insights:** Analyze resource contention, isolate system-specific problems and export stakeholder-ready reports.
- **Job and workflow insights:** Get a complete historical view of specific jobs and workflows to understand performance trends.

More observability features: Redwood Insights Premium

Upgrade Redwood Insights with customizable dashboards and extended data retention to tailor reporting to every team and analyze trends over longer periods.

Insights Studio

Create, share and organize dashboards customized for your RunMyJobs environment, so teams can monitor performance, investigate issues faster and communicate results with confidence.

Start fast with pre-configured data sources: Build immediately with curated, ready-to-use RunMyJobs datasets.

Design dashboards for any audience: Mix and match flexible widgets like pivot tables, interactive charts, heatmaps and more to tell the story behind the data.

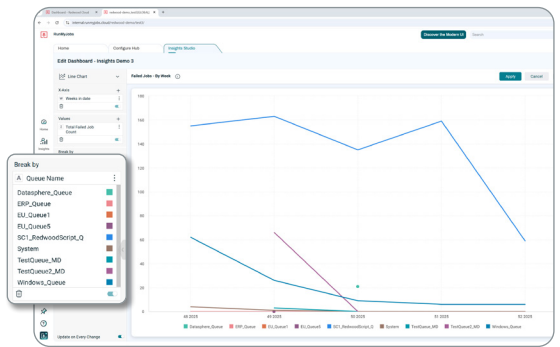

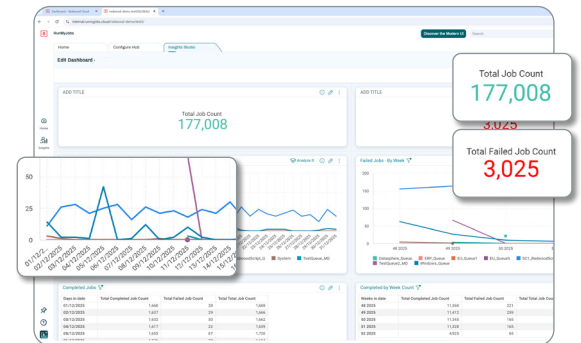

Standardize your metrics: Use built-in functions and custom formulas, reuse logic across dashboards and define shared calculations for consistent reporting.

Stay organized and share insights: Structure dashboards in folders, manage access and keep content easy to find as adoption grows.

Provide targeted access: Optionally customize the RunMyJobs interface to give users access to Redwood Insights and the dashboards you define.

Extended data retention

Upgrade from three to 15 months of analytics data.

- ✓ Support audits and compliance needs
- ✓ Drive seasonal and long-term analysis

Unlock hidden efficiencies in your enterprise
