

Scheduling for the 21st century with RunMyJobs by Redwood

Beyond scheduling and workload automation

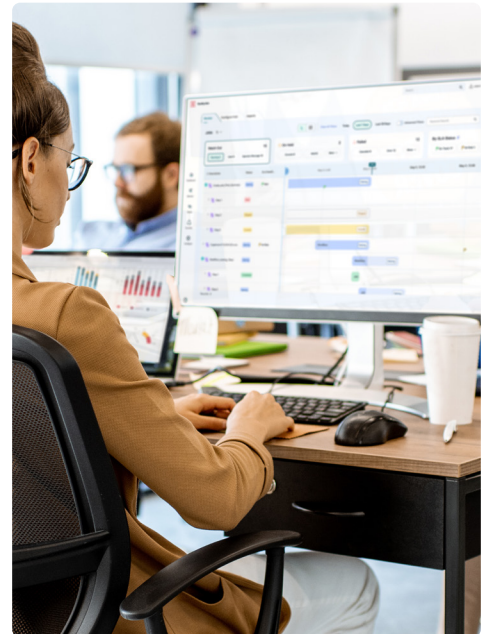

RunMyJobs eliminates the frustrations of siloed and disconnected IT processes. Integrate and execute business-critical processes by closing the chasm between people and processes with a simple, consolidated and reliable solution. Scale without being constrained by the traditional challenges of legacy technology, complex license models or costly support arrangements.

Rapid automation with zero infrastructure

Move from heavy, outdated black-box tools to a fully managed automation service with complete visibility for optimal control and governance. Gain full transparency on business outcomes.

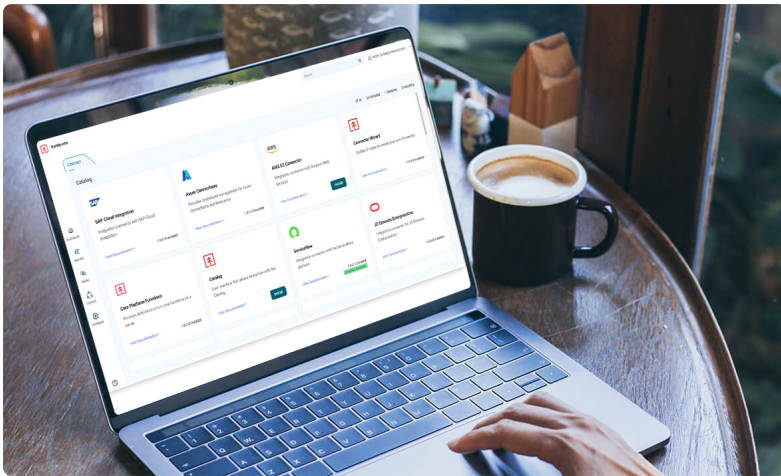

Your best people can now share the same vision for success and focus their effort on efficiency and innovation. Use RunMyJobs to rapidly automate, manage and monitor process execution for multiple applications across any complex, mixed or hybrid environment.

Our full software-as-a-service (SaaS), cloud-based delivery model means you never have to add infrastructure costs, including hardware management, to your automated processes.

We examined several tools, and we ultimately decided on RunMyJobs. Its combination of superb capabilities, the cloud delivery model and flexible pricing led to our decision.

— John Fitzsimmons, Technical Program Manager, Whitbread

Adaptability

Broad integration, quick scaling, dynamic modification

SaaS delivery

No infrastructure worries, no downtime, no added maintenance

Full support

Fast implementation, easy migration, 99.95% uptime

RunMyJobs is the 21st-century automation solution for your mission-critical processes.

Facilitate efficient big data and data warehouse management, IT security management, automated DevOps, infrastructure management, incident management, application management and more.

Features

If you've had enough of the uncertainty and worry about your end-of-life scheduler, we have the answer. RunMyJobs is a powerful multiplier that lowers the total cost of ownership for IT. It frees people and infrastructure while achieving consistent, reliable results.

- 1.** Enjoy fully managed service with 24x7 support, including automatic updates and zero downtime.
- 2.** Leverage a rich library of included connectors and templates, with the flexibility to add specialized enterprise integrations as your strategy evolves, keeping your investment aligned with business value.
- 3.** Get the most advanced conditional process handling you can buy. Use the visual process editor to graphically build and connect your automated activities within the context of IT and the business.
- 4.** Review automated processes and process chains as often as you like with up to three included pre-production environments. Check for compliance and make sure SLA levels are fully supported before running them in production.
- 5.** Empower your teams and easily scale automations with the freedom of unlimited users.
- 6.** See the results of automated processes with reports that give you the ability to easily export their contents for further analysis.

RunMyJobs gives us a competitive advantage that enables us to continue to grow our business and further improve service delivery.

– Chris Waterfield, Business Systems Manager, Anglian Water

Flexible

Redwood's architecture makes it the most adaptable automation solution available. Each process or chain of processes includes a definition of the process logic itself, the context and data that's used to determine conditional steps in the process and details on events, timing or other triggers for the automated action. This means no activity is too complex to automate.

The solution allows users to schedule processes to take place on their own and become part of a chain or queue of processes. These tasks are then handled by our process servers that securely communicate with your target systems to complete them.

Secure

Redwood Software has been the leader in automation technology for more than 25 years and remains the only global provider with this singular focus. As such, Redwood's approach to automation security is unparalleled in the industry. RunMyJobs' unique Secure Gateway technology works together with browser and single sign-on authentication and user lockout. A designated agent uses military-grade cryptography standards.

“We built, tested and migrated scheduled business jobs away from RemoteWare and AutoSys into RunMyJobs. Since then we've run almost three million jobs without a single problem. We also integrated automatic incident management directly into ServiceNow.”

- Director of Global Automation at an international services organization

Reliable

Redwood is the process automation standard for the Global 500, actively supporting its customers' success every day. Thousands of enterprises worldwide have a direct line of communication and escalation to the development and engineering experts who built Redwood's automation solutions, as Redwood has offices in the US, UK, Netherlands, Germany and Australia.

Redwood maintains the highest resiliency standards in the industry, with its top 30 customers running approximately 15 million processes per month. Last year alone, Redwood's cloud-based service automated more than 250 million activities and, once again, exceeded its guaranteed commitment of 99.95% uptime.

Its track record has earned Redwood Oracle® Gold Partner and SAP® Endorsed App status, along with recognition as a Leader in the Gartner® Magic Quadrant for SOAPs report.

We wanted to replace BMC Control-M for our scheduling, as we were unhappy with the lack of transparency around pricing and unpredictability around the billing. We chose Redwood's RunMyJobs because the commercials were transparent, and we could easily adapt workload to our changing needs.

– IT Director at an international financial organization

Migration is easy

It's easy to move away from legacy batch processors, schedulers and outdated workload automation. In five measured steps, we'll complete your transition to the most flexible scheduling and workload automation service available.

01. Analysis:

Determine your best automation strategy.

02. Training:

See how to get the most from Redwood process automation.

03. Conversion:

Move from legacy systems to your future.

04. Testing:

Confirm you've got it right.

05. Go-live:

Replace old tools and begin ongoing process improvement with new visibility.

RunMyJobs replaces any automation or scheduling tool, putting you in control of today and where you'll be tomorrow.

See how easy it can be to upgrade your automation solution.
